

Joel Dewbre

Joeld27@gmail.com (214) 354-2747 – 3290 Bastrop Court, Rockwall, Texas, 75032

Seasoned full stack software engineer in data driven web application development. Industry domain knowledge includes Financial, Consulting, Automotive, Health and Green services industries.

- Expert knowledge in developing multiple .NET web applications from the ground up.
- Expert knowledge in enhancing .NET web applications to be Extensible, Scalable, and Maintainable while supporting ongoing development.
- Architecting, Designing, and Coding full stack systems using Microsoft Technologies.
- Proactive team player and problem solver.

TECHNICAL SKILLS

- **Programming:** C#.NET, VB.NET, TypeScript, JavaScript, HTML, CSS, Power Shell
 - 20+ years
- **Backend:** SQL Server, Stored Procedures, T-SQL, SSIS, Entity Framework, LINQ, Dapper, JQuery
- **Middle Layer:** .NET, ASP.NET, MVC, .NET Web API, NServiceBus, OAuth2, JWT
- **Front End:** JavaScript, Typescript, Vue.js, Knockout.js, Ajax, JSON, XML, Bootstrap, HTML/CSS.
- **Cloud:** Azure
- **OS:** Windows Server 2000/2012, Unix, Linux Ubuntu
- **Development Environments:** Visual Studio, Visual Studio Code
- **Integrations:** QuickBooks Online, Salesforce,
- **CI/CD:** TFS, TeamCity, Octopus Deploy, NodeJS, npm, Git, Bitbucket, SVN
- **Architecture:** DDD, SOA, Distributed Messaging, Microservices, Web APIs, REST, MVC, Webform, MEF, client/server

PROFESSIONAL EXPERIENCE

Service Autopilot - September 2015 - July 2024,
Richardson, TX
Application Architect, Team Lead

- Started as a Team Lead Software Engineer using C# ASP.NET and led a team of five, I coordinated with the Product team and Stakeholders, designed and built software solutions in a timely and efficient manner for SaaS CRM product.
- Responsible for providing technical direction to my team, assignments, supervising tasks, and mentoring team members while also developing.
- Redesigned white labeled client portal using Vue.js. This web app is used by our clients to service their customers for service requests, payments, etc.
- Architected and implemented a two-way Quickbooks (both Desktop and Online) integration for the SaaS CRM platform, automating and synchronization between CRM and accounting workflows.
- Designed and developed integration from the SaaS product to Salesforce.

- Built out CI/CD solution using TeamCity and Octopus deploy.
- Worked with the CIO/Business co-owner to redesign the monolithic system to be more Scalable, Extensible, Maintainable without interrupting ongoing development.
- Implemented Domain Driven Design (DDD) using RabbitMQ messaging, Web APIs and microservices to enhance the system. This change removed production bottlenecks and improved performance.
- Created first few microservices using distributed messages to prototype the solution which demonstrated a significant speed improvement for the overall SaaS product. We went from daily production issues at 3k business to doubling our client base without seeing any performance issues.
- Implemented code unit tests and promoted ideas to the team to create more confidence in modifications to existing code.

ISN – May 2015 - August 2015

Dallas, TX

Dev Support Team

- SaaS safety management software for high risk, high skill demanding projects.
- Worked Dev Support team to handle incoming support tickets and resolve production issues using SQL and VB.NET.

Driven Solutions – June 2012 - April 2015

Addison, TX

Team Lead Dev

- Managed the relationship between the business and the development team. I worked with the business to analyze business problems then architect, develop, and implement solutions.
- Responsible for providing technical direction to my team, handing out assignments using Agile, supervising tasks, and mentoring team members.
- I developed while leading this team of six developers.
- Led the team to perform maintenance and enhancements on a new CRM web application. My team built external interfaces and peripheral applications for the new CRM.
- The external interfaces include batch processing jobs and a web service for adding, changing and cancelling memberships. Batch job leverages MEF and Inheritance to quickly accommodate customer data variances.
- Built an MVC3 website using SOLID, IoC, ASP.NET, C# and Telerik's KendoUI for tow truck companies to complete their own invoices.

Acubits – March 2009 - June 2012

McKinney, TX

IT Services – Managing Consultant

- Foster client relationships, requirements gathering, and problem solving through architecting, developing, and implementing cross-browser custom web applications.
- Developed custom solutions for clients using ASP.NET, JavaScript, jQuery and C# to build web solutions.

- Data access solutions varied from SQL server stored procedures to RESTful data services.

Zimbra (formerly Telligent) - April 2004 - February 2009

Richardson, TX

IT Services - Senior Software Engineer

Born Information Services - March 1998 - April 2004

IT Services - Consultant

Pagenet - February 1993 - March 1998

Plano, TX

Software Engineer
